

Компресионни фитинги за изграждане на водопреносни мрежи

Използването на тези фитинги е много просто и не изисква допълнително оборудване.

Водоплътността на връзката се осъществява чрез гумено (NBR) уплътнение. Допустимата работна температура е в границите от -20°C до +80°C. Допустимите налягания при 20°C са PN10 и PN16.
